

SMART TECHNOLOGY REPORT

Cybersecurity and Blockchain | Research Intelligence Overview | 2023

Executive Summary

The Cybersecurity and Blockchain domain produced 166 total research outputs in 2023, including 144 publications, 7 patents, 0 grants and 15 theses. The year-on-year growth was 24.81%, while the long-term CAGR stands at 14.79%. Across all participating institutions, the average Grant Impact Score was 31.86.

Year Overview

2023 Snapshot

The selected technology recorded **166** total research outputs during the selected year. Publications contributed **144** outputs, while patents contributed **7**.

Grant and thesis activity recorded **0** and **15** outputs respectively.

144	7	0	15
PUBLICATIONS	PATENTS	GRANTS	THESES
TOTAL RESEARCH OUTPUT			166
YEAR-ON-YEAR GROWTH		COMPOUND ANNUAL GROWTH RATE	
24.81%		14.79%	

Understanding the Growth Metrics

YoY Growth: Measures how much research output changed compared with the previous year. A positive value means output increased, while a negative value means output declined.

CAGR: Measures the average annual growth rate over the entire analysed period. Unlike YoY, which focuses on one year-to-year change, CAGR provides a longer-term view of the research trend.

Grant Impact

The average Grant Impact Score for the selected technology was **31.86**. This provides an additional indicator for understanding the impact associated with grant-supported research activity.

5. Research Trend & Year Analysis

Research activity for **Cybersecurity and Blockchain** across the analysed period, with emphasis on the selected year **2023**.

Research Output Trend

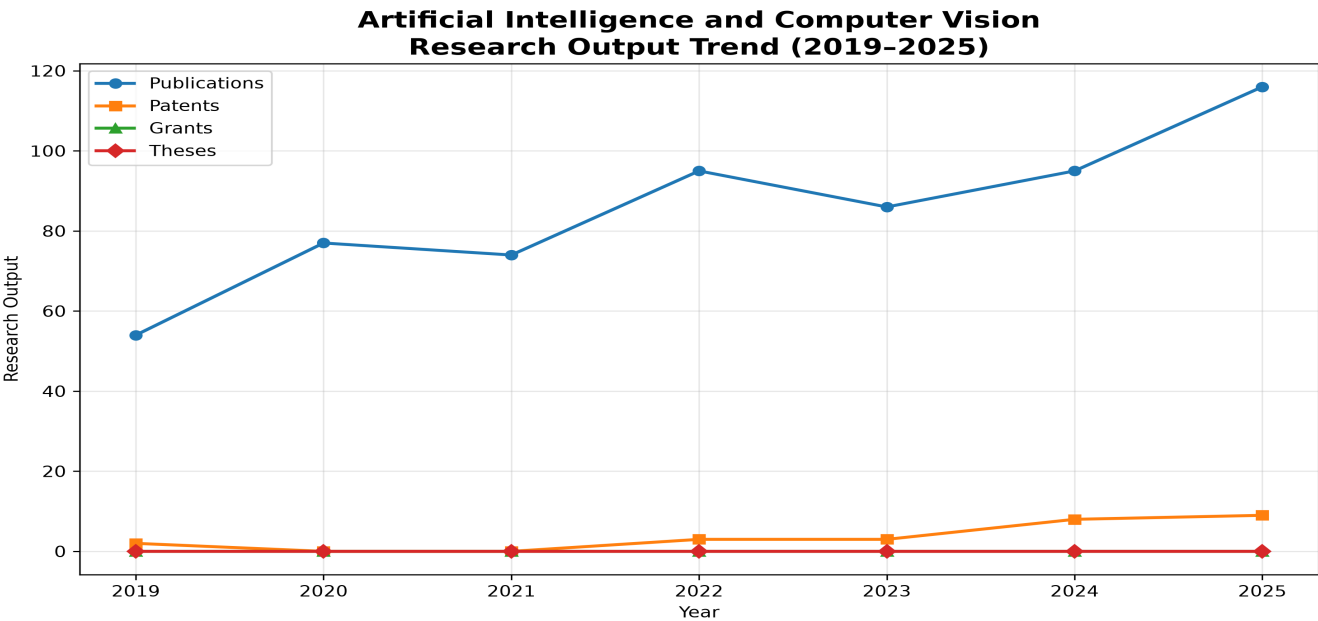

Figure 1. Year-wise research output trend for Cybersecurity and Blockchain. The graph compares publications, patents, grants and theses.

Trend Interpretation

Short-Term View Research output increased by 24.81% compared with the previous year. This indicates positive short-term momentum.	Long-Term View Over the longer period, the domain recorded a positive CAGR of 14.79% . This indicates that despite year-to-year fluctuations, research activity has grown overall.
--	---

2023 Research Overview

In **2023**, the **Cybersecurity and Blockchain** domain recorded **166** total research outputs. This included **144** publications, **7** patents, **0** grants and **15** theses.

Funding Observation

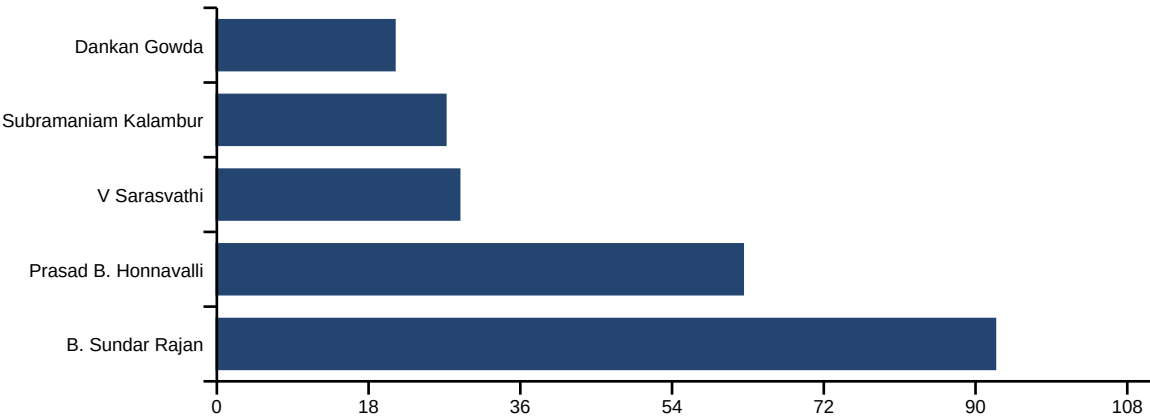

The selected year contains no grant-related outputs in the current dataset. Therefore, grant activity does not contribute to the research-output total for 2023. The Grant Impact Score is retained as a supplementary funding-related indicator.

6. Research Landscape

This section identifies the leading researchers and institutions associated with **Cybersecurity and Blockchain**.

Top Researchers

Top Researchers by Research Score

Rank	Researcher	Institution	Score
	B. Sundar Rajan	Indian Institute of Science Bangalore	92.30
	Prasad B. Honnavalli	PES University	62.38
	V Sarasvathi	PES University	28.74
	Subramaniam Kalambur	PES University	27.10
	Dankan Gowda	International Institute of Information Technology Bangalore	21.06

7. Leading Institutions

Institutions are ranked according to their research output within the selected technology.

Institution output values are currently zero or unavailable for the selected technology/year, so a meaningful institution comparison chart cannot be displayed.

Rank	Institution	Research Output
	Indian Institute of Science Bangalore	0
	R V College of Engineering	0
	CMR Institute of Technology	0
	B.M.S. College of Engineering	0
	International Institute of Information Technology Bangalore	0
	Dayananda Sagar College of Engineering	0
	M.S. Ramaiah Institute of Technology	0

8. Key Insights

- Research output increased by 24.81% compared with the previous year.
- The positive CAGR of 14.79% indicates long-term growth across the analysed period.
- **B. Sundar Rajan** ranked first with a research score of **92.30**.
- The selected year recorded **166** total research outputs.

9. Recommendations

- Strong growth detected. Continued investment is recommended.
- Grant funding should be strengthened to improve technology development.

SMART Report Note: This report is automatically generated from the research datasets and analytical outputs processed by the SMART trend engine.
